Databases: SQL(MySQL, SQLite, SQL Server), PostgreSQL, NoSQL(MongoDB), Mongoose.js
Servers: Apache, Node.js
Methodology: OOP - Object Oriented Programming, MVC, RESTful Architecture, Agile, Scrum
Version Control: Git, Github, Cloud9

EMPLOYMENT

Coding Dojo
Web Development Bootcamp · Oct 2016 to Current · Chicago, IL
Completed intensive web development program requiring 60 to 80 hours per week over a 14 week period. Worked tirelessly learning three full-stack languages by doing extensive reading, research, individual and group projects. Currently working on personal portfolio projects during one month residency period.

Projects

Woot Reboot – Worked in a team of two to rebuild the website Woot in Ruby/Rails. Used a Postgres database accessed through Rails Active Record. Uses JQuery on the front-end to populate dropdown menus from the nav-bar. Stylized using Twitter Bootstrap and CSS. Used Git/Github for version control. Also implemented Stripe to process payments.

Group Chat – Javascript-based group chat app, built in Node.Js using Angular and Socket.io. Multiple users can access/login to app using IP address and chat with other users with real-time updates.

Friends – Python app built using Django as the framework and a MySQL database. Simple but similar process as Facebook for adding/removing friends, and having the ability to view the profile of a specific user when clicking on their name.

Humana Inc
Customer Care Specialist · Dec 2012 to May 2014 · Chicago, IL
Assisted clients and employees with web and device technical issues. Helped members with website issues including login/registration problems and site functionality problems. Point-of-contact for members having device issues – walked them through process of fixing devices, uploading information from devices, and initial set-up of devices. Created escalated IT tickets when needed using proprietary ticketing system.
